Clevis Pins

Carbon Steel and Stainless Steel

Grooved

Pinned

Adjustable

Self Locking

Depending on the type of pin, and your application you will need to match the clevis pin with an appropriate retaining pin or clip.

Some examples of retaining pins and clips include...

- Split pins
- Roll pins
- Coiled pins
- R-clips
- E-clips
- Circlips

Also check out the Ball Lock Pins catalogue for an extended range of self locking pins.

Clevis pins are used as a quick and secure fastener instead of bolts or rivets. Designed with a flat head on one end and groove or cross-hole at the other, a clevis pin is inserted through the holes at the pronged ends of a clevis and is kept in place by a locking pin or clip.

NOTE! Locking pins or clips need to be purchased separately

Type the part number from this catalogue into the search box on any web page for more information, pricing and availability.

Part Numbering

CLP	-	095	-	0508	G	-	S6	-	AD
1		2		3	4		5		6

1: Clevis Pin Reference:

CLP: Clevis Pin
 BLP: Self Locking Ball Type
 (Note, only basic ball lock pins are shown in this catalogue. A more comprehensive range of ball lock pins are included in the BALL LOCK PINS catalogue)

2: Pin Diameter (Nominal):

Diameter is in mm to 1 decimal place with the decimal point omitted.

eg;
 060 = 6mm
 095 = 9.5mm
 120 = 12mm

3: Effective Length:

Effective length is to 1 decimal place with the decimal point removed.

eg;
 0508 = 50.8mm

4: Groove Indicator

G: When present indicates grooved type for clip locking

5: Material

CZ: Carbon Steel Zinc Plated
 P: Plain carbon steel
 S4: 300 Grade Stainless Steel
 S6: 316 Grade Stainless Steel

6: Adjustable Indicator

AD: When present indicates adjustable type with multiple holes for locking at a choice of distances.

Basic Diagrams

Adjustable Clevis Pins

Tips

Clevis pins are used as a quick and secure fastener instead of bolts or rivets. Designed with a flat head on one end and groove or cross-hole at the other, a clevis pin is inserted through the holes at the pronged ends of a clevis and is kept in place by a locking pin or clip.

Don't confuse the effective length (EL) with the overall length (L). The effective length is the distance between the bottom of the head and the start of the locking pin hole or clip groove. This is the length that can be secured by the pin.

Adjustable clevis pins have multiple locking holes, allowing for securing at a range of effective lengths.

We also have a general pins catalogue which includes many different types of locking pins.

PDF catalogues are available for the many types of locking pins and clips that can be used to secure a clevis pin.

Catalogue items on a dark grey background are usually made to order and will require large quantities for an economical price. Where possible please use items shown against a white background.
